## Contents

Finite-Stage Models	
1. Introduction 1	
2. A Gambling Model 2	
3. A Stock-Option Model 4	
4. Modular Functions and Monotone Policies 5	5
5. Accepting the Best Offer 11	
6. A Sequential Allocation Model 14	
7. The Interchange Argument in Sequencing	7
Problems 21	
Notes and References 26	
Discounted Dynamic Programming	
Discounted Dynamic Programming	
Introduction 29	
1. Introduction 29	
Introduction 29     The Optimality Equation and Optimal Policy	
<ol> <li>Introduction 29</li> <li>The Optimality Equation and Optimal Policy</li> <li>Method of Successive Approximations 35</li> </ol>	
<ol> <li>Introduction 29</li> <li>The Optimality Equation and Optimal Policy</li> <li>Method of Successive Approximations 35</li> <li>Policy Improvement 38</li> </ol>	
1. Introduction 29 2. The Optimality Equation and Optimal Policy 3. Method of Successive Approximations 35 4. Policy Improvement 38 5. Solution by Linear Programming 40	
<ol> <li>Introduction 29</li> <li>The Optimality Equation and Optimal Policy</li> <li>Method of Successive Approximations 35</li> <li>Policy Improvement 38</li> <li>Solution by Linear Programming 40</li> </ol>

3. Bayesian Sequential Analysis 58
4. Computational Approaches 60
5. Optimal Search 63
Problems 68
References 71
IV. Maximizing Rewards—Positive Dynamic Programming
Introduction and Main Theoretical Results 73
2. Applications to Gambling Theory 76
3. Computational Approaches to Obtaining V 83
Problems 85
Notes and References 88
V Access December Office Long
V. Average Reward Criterion
1. Introduction and Counterexamples 89
Existence of an Optimal Stationary Policy 93
3. Computational Approaches 98
Problems 103
Notes and References 105
and the second s
M. Carriera, C. L. d. H.
VI. Stochastic Scheduling
1. Introduction 107
2. Maximizing Finite-Time Returns—Single Processor 108
3. Minimizing Expected Makespan—Processors in Parallel 109
4. Minimizing Expected Makespan—Processors in Series 114
5. Maximizing Total Field Life 118
6. A Stochastic Knapsack Model 122
7. A Sequential-Assignment Problem 124
Problems 127
Notes and References 129
VII. Bandit Processes
1. Introduction 131
2. Single-Project Bandit Processes 131
3. Multiproject Bandit Processes 133
4. An Extension and a Nonextension 143
5. Generalizations of the Classical Bandit Problem 145
Problems 150
Notes and References 151

## Appendix: Stochastic Order Relations

1. Stochastically Larger 153

2. Coupling 154

3. Hazard-Rate Ordering 156

4. Likelihood-Ratio Ordering 157
Problems 160

Problems 160 Reference 161
