

CONTENTS

1. INTRODUCTION	
1.1 The Linear Programming Problem	2
1.2 Examples of Linear Problems	7
1.3 Geometric Solution	14
1.4 The Requirement Space	18
1.5 Notation	24
Exercises	25
Notes and References	
2. RESULTS FROM LINEAR ALGEBRA AND CONVEX ANALYSIS	
2.1 Vectors	39
2.2 Matrices	44
2.3 Simultaneous Linear Equations	54
2.4 Convex Sets and Convex Functions	58
2.5 Polyhedral Sets and Polyhedral Cones	64
2.6 Representation of Polyhedral Sets	66
2.7 Farkas's Theorem	70
Exercises	72
Notes and References	80
3. THE SIMPLEX METHOD	
3.1 Extreme Points and Optimality	81
3.2 Basic Feasible Solutions	85
3.3 Improving a Basic Feasible Solution	94
3.4 Termination: Optimality and Unboundedness	101
3.5 The Simplex Method	108
3.6 The Simplex Method in Tableau Format	114
3.7 Block Pivoting	122
Exercises	124
Notes and References	136
4. STARTING SOLUTION AND CONVERGENCE	
4.1 The Initial Basic Feasible Solution	137
4.2 The Two-Phase Method	142
4.3 The Big- M Method	154
4.4 The Single Artificial Variable Technique	163

4.5	Degeneracy and Cycling	165
4.6	Lexicographic Validation of Cycling Prevention	170
	Exercises	174
	Notes and References	187
5	SPECIAL SIMPLEX FORMS AND OPTIMALITY CONDITIONS	
5.1	The Revised Simplex Method	188
5.2	The Simplex Method for Bounded Variables	201
5.3	The Kuhn-Tucker Conditions and the Simplex Method	212
	Exercises	220
	Notes and References	234
6.	DUALITY AND SENSITIVITY	
6.1	Formulation of the Dual Problem	236
6.2	Primal-Dual Relationships	242
6.3	Economic Interpretation of the Dual	248
6.4	The Dual Simplex Method	250
6.5	The Primal-Dual Method	257
6.6	Finding an Initial Dual Feasible Solution: The Artificial Constraint Technique	265
6.7	Sensitivity Analysis	267
6.8	Parametric Analysis	277
	Exercises	286
	Notes and References	304
7.	THE DECOMPOSITION PRINCIPLE	
7.1	The Decomposition Algorithm	306
7.2	Numerical Example	311
7.3	Getting Started	320
7.4	The Case of Unbounded Region X	321
7.5	Block Diagonal Structure	328
	Exercises	338
	Notes and References	351
8.	THE TRANSPORTATION AND ASSIGNMENT PROBLEMS	
8.1	Definition of the Transportation Problem	353
8.2	Properties of the A Matrix	356
8.3	Representation of a Nonbasic Vector in Terms	

of the Basic Vectors	365
8.4 The Simplex Method for Transportation Problems	367
8.5 An Example of the Transportation Algorithm	373
8.6 Degeneracy in the Transportation Problem	378
8.7 The Simplex Tableau Associated with a Transportation Tableau	382
8.8 The Assignment Problem	383
8.9 The Transshipment Problem	391
Exercises	392
Notes and References	403
9. MINIMAL COST NETWORK FLOWS	
9.1 The Minimal Cost Network Flow Problem	404
9.2 Properties of the A Matrix	407
9.3 Representation of a Nonbasic Vector in Terms of the Basic Vectors	411
9.4 The Simplex Method for Network Flow Problems	413
9.5 An Example of the Network Simplex Method	418
9.6 Finding an Initial Basic Feasible Solution	419
9.7 Network Flows with Lower and Upper Bounds	420
9.8 The Simplex Tableau Associated with a Network Flow Problem	425
Exercises	426
Notes and References	439
10. THE OUT-OF-KILTER ALGORITHM	
10.1 The Out-of-Kilter Formulation of a Minimal Cost Network Flow Problem	441
10.2 Strategy of the Out-of-Kilter Algorithm	446
10.3 Summary of the Out-of-Kilter Algorithm	458
10.4 An Example of the Out-of-Kilter Algorithm	460
Exercises	463
Notes and References	472
11. MAXIMAL FLOW, SHORTEST PATH, AND MULTICOMMODITY FLOW PROBLEMS	
11.1 The Maximal Flow Problem	474
11.2 The Shortest Path Problem	481

11.3 Multicommodity Flows	492
11.4 Characterization of a Basis for the Multicommodity Minimal Cost Flow Problem	502
Exercises	507
Notes and References	522
APPENDIX. PROOF OF THE REPRESENTATION THEOREM	523
INDEX	559
