|--|-------------|
| <b>Introduction .....</b>                          | <b>xvii</b> |
| What Is a Macro? .....                             | xviii       |
| What Does VBA Have to Do with Macros? .....        | xxix        |
| What You Should Know Before Reading This Book..... | xxix        |
| What's in the Book .....                           | xx          |
| This Book's Special Features .....                 | xx          |

## I GETTING STARTED WITH VBA

---

|   |           |
|---|-----------|
| <b>1 Creating and Running Recorded Macros .....</b>               | <b>3</b>  |
| Recording a VBA Macro .....                                       | 5         |
| Recording a Word Macro .....                                      | 5         |
| Recording an Excel Macro .....                                    | 7         |
| Running a Recorded Macro .....                                    | 8         |
| Using the Macro Name List .....                                   | 8         |
| Assigning Shortcut Keys to Recorded Word Macros.....              | 9         |
| Assigning Shortcut Keys to Recorded Excel Macros .....            | 10        |
| Creating a Quick Access Toolbar Button for a Recorded Macro ..... | 11        |
| From Here .....   | 13        |
| <b>2 Writing Your Own Macros .....</b>                            | <b>15</b> |
| Activating the Ribbon's Developer Tab .....                       | 16        |
| Displaying the Visual Basic Editor .....                          | 16        |
| Touring the Visual Basic Editor .....                             | 17        |
| Creating a New Module .....                                       | 17        |
| Opening an Existing Module .....                                  | 18        |
| Understanding VBA Procedures .....                                | 19        |
| Creating a Command Macro .....                                    | 19        |
| Writing a Command Macro .....                                     | 20        |
| Running a Command Macro .....                                     | 21        |
| Entering VBA Statements .....                                     | 22        |
| Creating a User-Defined Function .....                            | 23        |
| Understanding User-Defined Functions .....                        | 24        |
| Writing a User-Defined Function .....                             | 25        |
| Using a Function .....  | 26        |
| Taking Advantage of IntelliSense .....                            | 27        |
| List Properties/Methods .....                                     | 27        |
| List Constants .....  | 28        |

|  |           |
|--|-----------|
| Parameter Info .....                           | 29        |
| Complete Word .....                            | 30        |
| Shutting Down the Visual Basic Editor .....    | 30        |
| From Here .....                                | 30        |
| <b>3 Understanding Program Variables .....</b> | <b>33</b> |
| Declaring Variables .....                      | 33        |
| Avoiding Variable Errors .....                 | 35        |
| Variable Data Types .....                      | 36        |
| Changing the Default Data Type .....           | 39        |
| Creating User-Defined Data Types .....         | 39        |
| Using Array Variables .....                    | 40        |
| Dynamic Arrays .....                           | 41        |
| Multidimensional Arrays .....                  | 44        |
| Working with Constants .....                   | 44        |
| Using Built-In Constants .....                 | 44        |
| Creating User-Defined Constants .....          | 45        |
| Storing User Input in a Variable .....         | 45        |
| Getting Input Using MsgBox .....               | 45        |
| Getting Input Using InputBox .....             | 50        |
| From Here .....                                | 51        |
| <b>4 Building VBA Expressions .....</b>        | <b>53</b> |
| Understanding Expressions .....                | 53        |
| Working with VBA Operators .....               | 54        |
| Arithmetic Operators .....                     | 55        |
| The Concatenation Operator .....               | 56        |
| Comparison Operators .....                     | 56        |
| Logical Operators .....                        | 57        |
| Understanding Operator Precedence .....        | 57        |
| The Order of Precedence .....                  | 58        |
| Controlling the Order of Precedence .....      | 58        |
| Working with Numeric Expressions .....         | 60        |
| VBA's Math Functions .....                     | 60        |
| VBA's Financial Functions .....                | 62        |
| Working with String Expressions .....          | 63        |
| Working with Logical Expressions .....         | 66        |
| The And Operator .....                         | 67        |
| The Or Operator .....                          | 67        |
| The Xor Operator .....                         | 67        |
| The Not Operator .....                         | 67        |
| Working with Date Expressions .....            | 68        |
| From Here .....                                | 70        |

|  |           |
|--|-----------|
| <b>5 Working with Objects</b>                                | <b>71</b> |
| What Is an Object?   | 71        |
| The Object Hierarchy   | 73        |
| Working with Object Properties                               | 73        |
| Setting the Value of a Property                              | 75        |
| Returning the Value of a Property                            | 75        |
| Working with Object Methods                                  | 75        |
| Handling Object Events                                       | 77        |
| Working with Object Collections                              | 78        |
| Assigning an Object to a Variable                            | 79        |
| The <code>Is</code> Operator                                 | 80        |
| Working with Multiple Properties or Methods                  | 80        |
| Example: The <code>Application</code> Object                 | 81        |
| Displaying a Message in the Status Bar                       | 82        |
| Changing the Title Bar Caption                               | 82        |
| Working with the Application Window                          | 82        |
| Accessing an Application's Built-In Dialog Boxes             | 83        |
| Checking Spelling  | 87        |
| Example: The <code>Window</code> Object                      | 88        |
| Specifying a <code>Window</code> Object                      | 88        |
| Opening a New Window   | 88        |
| Activating a Window  | 88        |
| From Here  | 89        |
| <b>6 Controlling Your VBA Code</b>                           | <b>91</b> |
| Code That Makes Decisions                                    | 91        |
| Using <code>If...Then</code> to Make True/False Decisions    | 92        |
| Using <code>If...Then...Else</code> to Handle a False Result | 93        |
| Making Multiple Decisions                                    | 94        |
| Using the <code>And</code> and <code>Or</code> Operators     | 95        |
| Using Multiple <code>If...Then...Else</code> Statements      | 95        |
| Using the <code>Select Case</code> Statement                 | 97        |
| Functions That Make Decisions                                | 101       |
| The <code>IIf</code> Function                                | 101       |
| The <code>Choose</code> Function                             | 102       |
| The <code>Switch</code> Function                             | 103       |
| Code That Loops  | 104       |
| Using <code>Do...Loop</code> Structures                      | 105       |
| Using <code>For...Next</code> Loops                          | 106       |
| Using <code>For Each...Next</code> Loops                     | 109       |

|  |     |
|--|-----|
| Using Exit For or Exit Do to Exit a Loop ..... | 110 |
| Indenting for Readability .....                | 111 |
| From Here .....                                | 111 |

## II PUTTING VBA TO WORK

---

|  |            |
|--|------------|
| <b>7 Programming Word .....</b>          | <b>115</b> |
| Working with Documents .....             | 115        |
| Specifying a Document Object .....       | 115        |
| Opening a Document .....                 | 116        |
| The RecentFiles Object .....             | 116        |
| Creating a New Document .....            | 118        |
| Saving a Document .....                  | 118        |
| Closing a Document .....                 | 121        |
| Closing All Open Documents .....         | 121        |
| Example: Making Document Backups .....   | 122        |
| Working with Text .....                  | 124        |
| Working with the Range Object .....      | 125        |
| The Range Method .....                   | 125        |
| The Range Property .....                 | 125        |
| Reading and Changing Range Text .....    | 126        |
| Formatting Text .....                    | 126        |
| Inserting Text .....                     | 127        |
| Deleting Text .....                      | 128        |
| Using the Selection Object .....         | 129        |
| Checking the Selection Type .....        | 129        |
| Moving the Insertion Point .....         | 130        |
| Extending the Selection .....            | 131        |
| Collapsing the Selection .....           | 132        |
| Using the Words Object .....             | 132        |
| Working with the Sentences Object .....  | 133        |
| Displaying Sentence Word Counts .....    | 134        |
| Programming the Paragraph Object .....   | 136        |
| From Here .....                          | 138        |
| <b>8 Programming Excel .....</b>         | <b>139</b> |
| Excel's Application Object .....         | 139        |
| Accessing Worksheet Functions .....      | 139        |
| Recalculating Workbooks .....            | 140        |
| Converting a String into an Object ..... | 140        |
| Pausing a Running Macro .....            | 141        |
| Some Event-Like Methods .....            | 141        |

|   |     |
|---|-----|
| <b>Manipulating Workbook Objects</b>                | 146 |
| Specifying a Workbook Object                        | 146 |
| Opening a Workbook                                  | 146 |
| Creating a New Workbook                             | 147 |
| Specifying the Number of Sheets in a New Workbook   | 147 |
| Saving Every Open Workbook                          | 148 |
| Closing a Workbook                                  | 150 |
| <b>Dealing with Worksheet Objects</b>               | 150 |
| Specifying a Worksheet Object                       | 150 |
| Creating a New Worksheet                            | 151 |
| Properties of the Worksheet Object                  | 151 |
| Methods of the Worksheet Object                     | 152 |
| <b>Working with Range Objects</b>                   | 153 |
| Returning a Range Object                            | 153 |
| Selecting a Cell or Range                           | 158 |
| Defining a Range Name                               | 162 |
| Inserting Data into a Range                         | 162 |
| Returning Data About a Range                        | 163 |
| Resizing a Range                                    | 163 |
| From Here   | 164 |
| <b>9 Programming PowerPoint</b>                     | 165 |
| <b>PowerPoint's Presentation Object</b>             | 165 |
| Specifying a Presentation Object                    | 165 |
| Opening a Presentation                              | 166 |
| Creating a New Presentation                         | 166 |
| Presentation Object Properties                      | 166 |
| Presentation Object Methods                         | 167 |
| The Juggling Application                            | 168 |
| <b>Working with PowerPoint Slide Objects</b>        | 170 |
| Specifying a Slide                                  | 170 |
| Creating a New Slide                                | 171 |
| Inserting Slides from a File                        | 172 |
| Slide Object Properties                             | 172 |
| The Juggling Application: Creating the Slides       | 173 |
| Slide Object Methods                                | 174 |
| <b>Dealing with Shape Objects</b>                   | 174 |
| Specifying a Shape                                  | 174 |
| Adding Shapes to a Slide                            | 175 |
| Some Shape Object Properties                        | 178 |
| The Juggling Application: Creating the Title Slide  | 180 |
| Some Shape Object Methods                           | 181 |
| The Juggling Application: Creating the Instructions | 183 |

|  |            |
|--|------------|
| Operating a Slide Show .....                                 | 186        |
| Slide Show Transitions .....                                 | 186        |
| Slide Show Settings .....                                    | 187        |
| Running the Slide Show .....                                 | 187        |
| From Here .....  | 188        |
| <b>10 Programming Access Databases .....</b>                 | <b>189</b> |
| Getting Ready: Two Steps Before You Begin .....              | 190        |
| Step One: Create a Reference .....                           | 190        |
| Step Two: Create a Data Source .....                         | 191        |
| Working with Database Records: Opening a Recordset .....     | 192        |
| Opening a Recordset Using a Table .....                      | 193        |
| Opening a Recordset: the Full Open Method Syntax .....       | 194        |
| Opening a Recordset Using a SELECT String .....              | 196        |
| Working with a Recordset .....                               | 198        |
| Getting at the Recordset Data .....                          | 198        |

### III GETTING THE MOST OUT OF VBA

---

|  |            |
|--|------------|
| <b>12 Creating Custom VBA Dialog Boxes .....</b> | <b>237</b> |
| Adding a Form to Your Project .....              | 238        |
| Changing the Form's Design-Time Properties ..... | 239        |
| The Appearance Category .....                    | 239        |
| The Behavior Category .....                      | 239        |
| The Font Category .....                          | 240        |
| The Misc Category .....                          | 240        |
| The Picture Category .....                       | 241        |
| The Position Category .....                      | 241        |
| The Scrolling Category .....                     | 241        |
| Working with Controls .....                      | 242        |
| Inserting Controls on a Form .....               | 242        |
| Selecting Controls .....                         | 243        |
| Sizing Controls .....                            | 244        |
| Moving Controls .....                            | 244        |
| Copying Controls .....                           | 244        |
| Deleting Controls .....                          | 245        |
| Grouping Controls .....                          | 245        |
| Setting Control Properties .....                 | 246        |
| Common Control Properties .....                  | 246        |
| Setting the Tab Order .....                      | 247        |
| Handling Form Events .....                       | 248        |
| Types of Form Controls .....                     | 248        |
| Command Buttons .....                            | 249        |
| Labels .....                                     | 249        |
| Text Boxes .....                                 | 249        |
| Frames .....                                     | 250        |
| Option Buttons .....                             | 250        |

|   |            |
|---|------------|
| Check Boxes .....   | 251        |
| Toggle Buttons .....  | 251        |
| List Boxes .....  | 251        |
| Scrollbars .....  | 253        |
| Spin Buttons .....  | 253        |
| Tab Strips and MultiPage Controls .....                               | 254        |
| <b>Using a Form in a Procedure .....</b>                              | <b>258</b> |
| Displaying the Form.....  | 258        |
| Unloading the Form.....   | 258        |
| Processing the Form Results .....                                     | 259        |
| From Here .....   | 262        |
| <b>13 Customizing the Office 2007 Ribbon .....</b>                    | <b>263</b> |
| Understanding Ribbon Extensibility.....                               | 263        |
| Extending the Ribbon: An Example .....                                | 265        |
| Step 1: Create a Macro-Enabled Office Document or Template .....      | 265        |
| Step 2: Create a Text File and Add the Custom XML Markup .....        | 267        |
| Step 3: Copy the Custom XML Markup File to the Document Package ..... | 268        |
| Step 4: Rename and Open the Document .....                            | 269        |
| More Complexity Means More Power .....                                | 270        |
| Hiding the Built-In Ribbon .....                                      | 270        |
| Creating Custom Tabs .....  | 271        |
| Creating a New Tab .....  | 271        |
| Customizing an Existing Tab .....                                     | 272        |
| Creating Custom Groups .....  | 273        |
| Creating a New Group .....  | 274        |
| Customizing an Existing Group .....                                   | 274        |
| Creating Custom Controls .....  | 275        |
| Common Control Attributes.....  | 276        |
| Creating a Button .....   | 277        |
| Creating a Menu .....   | 278        |
